The IUCN Red List of Threatened Species™ is a critical indicator of the health of the world's biodiversity. It is therefore important that assessments published on the IUCN Red List are transparent, fully documented, data-driven, and that the IUCN Red List Criteria have been applied correctly. In this webinar, **Resit Akçakaya** (Chair of the IUCN SSC Standards and Petitions Committee) will discuss some of the common misunderstandings when applying the Red List Criteria, and how to improve the chance of your assessments being published smoothly on the IUCN Red List. This webinar will discuss:

- Calculating **number of locations** in more complex situations.
- The data required to **project a population reduction** and how to document this.
- Use of the **extinction probability tool**.

On signing up you will have the opportunity to state any specific question you would like to be covered, within these topics. So, please register now and take this opportunity to tell us what is on your mind.

Interested, but can't attend? You can still register and tell us what Red List topics you would like to learn more about. All the IUCN Red List webinars will be recorded and the recordings will be made available on the IUCN Red List website.
