

IUCN - Classification of Conservation Actions In-Place			Note that this Classification Scheme is very different to the Conservation Actions Needed scheme. The intention of this scheme is simply to gather some basic information about what actions are currently in place to provide some guidance on what actions are needed. In all cases, after selecting an option a text box appears to capture additional information. Note that this is not currently published on the IUCN Red List, hence this information may also need to be captured under the Conservation Actions narrative which is published.
Version: 2.0			
Level of Classification		Definition	Exposition
1	2	3	
Monitoring & Planning			
1. Is there an Action Recovery Plan?		Is there a Recovery Plan, Species Conservation Plan, etc. in place? Select "Yes", "No" or "Unknown".	
2. Is there a systematic monitoring scheme?		Is there a monitoring scheme in place specifically for the taxon being assessed? Select "Yes", "No" or "Unknown". Such schemes include: <i>regular census counts, periodic aerial transects, fixed-point photographs, etc.</i>	
Land/Water Protection & Management			
3. Have conservation sites been identified?		Select "Yes, over entire range", "Yes, over part of range", "No" or "Unknown". Note that these should be sites which may or may not be currently receiving any protection, but they have been identified as being important areas e.g., <i>Key Biodiversity Areas, Important Bird Areas, Important Plant Areas, Ecologically and Biologically Significant Areas (marine), etc.</i>	
4. Does the taxon occur in at least one Protected Area?		Select "Yes", "No" or "Unknown". Protected Areas are usually those that fall within the IUCN Protected Area Categories of I - VI.	
4.1 If yes, indicate what proportion of the population is within Protected Areas (1-100%)		Estimate what percentage of the population is in protected areas. The relevant percentage range band can be selected or users can specify a certain percentage or range using the "Custom" option. Users may also indicate what percentage of the range of a taxon is within protected areas as a surrogate measure, but if this is used, it should be specified in the notes field against this item.	
5. Is there an area based regional management plan?		Is there a Management Plan in place for the Protected Areas or Conservation Sites identified above (this also includes area management plans for parts of the species range outside of protected areas/conservation sites)? Select "Yes", "No" or "Unknown".	
6. Is there invasive species control or prevention?		If invasive species are a threat to the taxon being assessed, are there any efforts underway to control invasives or prevent invasives from impacting the taxon. Select "Yes", "No", "Unknown" or "Not Applicable". If "Yes", provide details in the Conservation Actions narrative field.

		<i>Examples</i>	
Species Management			
	7. Is there a harvest management plan?		Select "Yes", "No" or "Unknown".
	8. Has the taxon been successfully reintroduced or introduced benignly?		Select "Yes", "No" or "Unknown". Successfully reintroduced taxa should be breeding and their off-spring should also have started breeding. Likewise for benign introductions - these are introductions outside of the known historical range of a taxon but in similar habitat, which are done purely for conservation reasons (not commercial or any other reasons). Details should be provided in the Conservation Actions narrative field.
	9. Is the taxon subject to <i>ex-situ</i> conservation?		Select "Yes", "No" or "Unknown". If yes, details of the <i>ex-situ</i> actions should be provided in the Conservation Actions narrative field.
Education & Legislation			
	10. Is the taxon the subject of any recent education or awareness programmes?		Select "Yes", "No" or "Unknown". If yes, provide details in the Conservation Actions narrative field.
	11. Is the taxon included in international legislation?		Select "Yes", "No" or "Unknown". If "Yes", specify in both the text box and the Conservation Actions narrative which legislation, e.g., <i>the CITES Appendices (indicate which Appendix), CMS Appendices, any of the CMS Regional Agreements (ASCOBAMS, AEWA, ACCOBAMS, EUROBATS, ACAP, etc.), Bern Convention, European Habitats Directive, International Whaling Convention, ICCAT, etc.</i>
	12. Is the taxon subject to any international management/trade controls?		Select "Yes", "No" or "Unknown". If yes, indicate the Convention, Treaty or Organization involved under the Conservation Actions narrative field if it has not already been specified. <i>Examples include CITES, Regional Fisheries Agreements, ICCAT, Marine Stewardship Council, Forestry Stewardship Council, Marine Aquarium Council, Phytosanitary Measures Agreement, US Endangered Species Act, etc.</i>
